The present sequence is a parvovirus wild-type non-structure protein 1 (NS1). The present invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The inventors claim an immunologically active polypeptide for the development of vaccinal immunity against parvovirus infection. Also claimed are DNA sequences wholly or partly duplicative of defined sequences. The polypeptides are used in vaccines for conferring protection against parvovirus infections in man and animals. The Invention Fetales to isolated polymetracide (11) and pulpeptide (11) reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymolocides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of stees expressing (II). (II) and (II) are useful for treating disorders in polypeptide and polymolectide sequences have applications in dispnostics, forensics, gene mapping, identification of mutations in diagnostics, forensics gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at Esquences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

```
The invention relates to a novel enterohaemorragic Escherichia coli 0157:H7-specific nucleic acid molecule. A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 0157:H7 infection. The nucleotide sequence of the genome of Enterohaemorragic E coli 0157:H7 was determined. The present sequence represents an E. coli 0157:H7-specific polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                Enterohemorragic Escherichia coli 0157:H7-specific nucleic acid molecule and a polypeptide and its use, a polypeptide, a vector and a host cell.
                                                                                                                         Enterohaemorragic E. coli 0157:H7-specific protein SEQ ID NO: 1121.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 3; SEQ ID NO 1121; 2067pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Talin binds to vinculin and this is reduced on incubation with, e.g. Vinl Talin binds to vinculin and this is reduced on incubation with, e.g. Vinl 2.1. Vinl2.1 is a specific vinculin binding peptide generated from a TSAR (Totally Synthetic Affinity Reagent) 12 library. Many changes at the Neternatus are not disruptive whereas most changes at the C-terminus are disruptive. Mutagenesis of Vinl2.1 was carried out deliberately contaminating the precursor reservoirs used to construct the contaminating the precursor reservoirs used to make mutated phage. The vinculin binding TSARs may alter the mobility or attachability of malignant cells, perhaps preventing or inhibiting metastasis. The TSARs are new and/or improved heterofunctional binding fusion porteline that have affinity for the ligand vinculin, and can be used to modulate the activity of the paramaceuticals, etc. Other TSARs can be designed to bind dynein and glutathione-S-transferase. Typical applications are: (i) inhibition of GST to treat cancers that produce high levels of this enzyme; (ii) attention mobility/atteachment of malignant cells, modulating placelet release and blood clotting, for TSARs directed against vinculin; (iii) TSARs against dynein are used to modulate nerve cell activity, sperm motility, mobility of protozoa, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying peptide(s) that bind specifically to dynein, vinculin or enzymes, eg. glutathione-S-transferase - by screening random peptide libraries, useful e.g. in immunoassays, affinity purification., tumour treatment, etc.
                                                                                                                                                                                                                                 totally synthetic affinity reagent; vinculin; dynein; enzyme; heterobifunctional binding fusion protein; glutathione S-transferase; cancer treatment; nerve cell activity; modulate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                46.4%; Score 45; DB 2; Length 200; 55.6%; Pred. The invention relates to a complex of protein-protein interactions

between a Shigella flexneri polypeptide (e.g. ospB, ospD, ipaD, ipaC,

content a Shigella flexneri polypeptide defined in the

specification. The complexes are formed using the yeast two-hybrid

conficient and specification in the sector a modulating compound obtained from the method of (2); (4) a SID

comprising the human polypeptides appearing as ABG70042-ABG70242; (5) a

comprising the human polypeptides appearing as ABG70042-ABG70242; (5) a

containing the vector; and (10) a protein comprising the conding the above polypeptide and a mammalian polypeptide defined in the containing the vector; and (10) a protein comprising the compound, containing the vector; and (10) a protein comprising the compound, containing the vector; and (10) a protein comprising the compound, containing the vector; and (10) a protein comprising the compound, containing the vector; and (10) a protein for treating or preventing chigellosis (bacillary dysentery) in a human or mammal. The present sequence represents a human prey protein isolated by the yeast two-hybrid assay, forming a complex of the invention with a shigella protein
                                                                                                 flexneri polypeptide and a prey mammalian or human placenta polypeptide for treating or preventing bacillary dysentery in a mammal or human.
                                                                              New complex of protein-protein interactions between a bait Shigella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hexosaminidase; enzyme; laundry; cleaning agent; hydrolysis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a complex of protein-protein interactions between a Shigella flexneri polypeptide (e.g. ospB, ospB), ipaD, ipaC, ipaH9.84 ospG and ospCl) and a mammalian polypeptide defined in the specification. The complexes are formed using the yeast two-hybrid system. Also included are (1) a recombinant host cell expressing the interactions between the Shigella flexneri polypeptide and amammalian polypeptide defined in the specification; (2) selecting a mammalian polypeptide defined in the specification; (2) selecting a modulating compound obtained from the method of (2); (4) as 1D computating compound obtained from the method of (2); (5) a SID comprising the human polypeptides appearing as ABG70042-ABG7042; (5) a SID polymelection of its fragment or variant comprising the above polypeptides a vector comprising (3); (6) a recombinant host cell cabove polypeptide avector comprising (3); (6) a recombinant host cell containing the vector; and (10) a protein chip comprising shigella containing the vector; and (10) a protein comprising the compound, polypeptide or polymucleotide is useful for treating or preventing shigelings (bacillary dysentery) in a human or mammal. The present sequence represents a human prev protein moment or mammal. The present sequence represents a human prev protein isolated by the yeast two-hybrid assay, forming a complex of the invention with a shigella protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Prey protein, ospB; ospD1; ipaD; ipaC; ipaH9.8; ospG; ospC1; Shigella; shigellosis; bacillary dysentery; antibacterial; yeast two-hybrid system; protein-protein interaction; SID; selected interacting domain; human.
                                                                                                                                                                                New complex of protein-protein interactions between a bait Shigella flexneri polypeptide and a prey mammalian or human placenta polypeptide for treating or preventing bacillary dysentery in a mammal or human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                         ï
                                                    enzymes (AAW85599-605) can be used in combination in
                                                            an aqueous laundry or cleaning product. The cleaning product is used especially used to launder fabrics and to clean dishes and tableware, particularly in an automatic dishwasher, but may also be used generally as hard surface cleaner. The cleaning product imparts antimicrobial activity and/or eliminates biofilm, the hexosaminidases having a minimum inhibitory concentration of less than about 0.125% but more preferably less than about 0.025%. (NB: entry was revised to change incorrect cross references in Comments field)

which represent the human OREX open reading frames 1 to 3161. The OREX sequences have activities such as: cytostatic; hepatotropic; vulnerary; cartiporiatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiparkrinsonian; nootropic; neuroprotective; osteopathic; antiparkrinsonian; neuroprotective; osteopathic; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; cardiant; thrombolytic; antidiamatory; antibacterial; cardiant; thrombolytic; antidiamatory; antidiabetic; hypotensive; cardiant; tantifungal; antitheumatic; antidiamatory; antidiapetic; hypotensive; corpreventing or treating pathological conditions associated with an organization or organization or organization and nucleic acids may be corrected is general disorder. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative cisoreace, organization; hypothyroidism, cholesterol ester disorders, osteoarthritis, graft vs host disease, cardiovascular disease, cidabetes mellitus, hypertension, hypothyroidism, cholesterol ester corrage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an antisense compound ({\tt I}), 16 to 30 bases in length targeted to specific base regions of a nucleic acid encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, Talin, antimicrobial, antiinflammatory, cytostatic, inhibitor; antisense gene therapy, infection, inflammation, Talin inhibitor; tumour; antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense compound useful for inhibiting expression of Talin and preventing or delaying infection, inflammation or tumor formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

human Talin. Also described: (a) an antisense compound up to 30 bases in length which inhibits the expression of human Talin; (b) a composition [II] comprising [I] or (a); and (c) inhibiting the expression of human Talin in human calls or tissues comprising contacting the cells or tissues in vitro with (I) or (a). (I) has antimicrobial, antiinflammatory and expression of activities, and can be used in antisense gene therapy and as a Talin expression inhibitor. (I) can be used: to inhibit the expression of human Talin in human cells or tissues; to prevent or delay infection, inflammation or tumour formation; and in diagnostics, the present sequence represents human Talin from the present invention

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     399
```

```
Virology 183:195-205(1991).

-I- FUNCTION: Seems necessary for viral DNA replication.

-I- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Goto H., Shinagawa M.;
"Construction and nucleotide sequence analysis of an infectious DNA
"Construction and nucleotide sequence analysis of an infectious DNA
clone of the autonomous parvovirus, mink enteritis virus.";
J. Gen. Virol. 72.867-875 (1991).
-I- FUNCTION: Seems necessary for viral DNA replication.
-I- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                  "Mapping specific functions in the capsid structure of canine
parvovirus and feline panleukopenia virus using infectious plasmid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE-91202123; PubMed-2016597;

-1- FUNCTION: Seems necessary for viral DNA replication.
-1- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.

"Nucleotide sequence analysis of the capsid genes and the right-hand terminal palindrome of porcine parvovirus, strain NADL-2.";
Virology 173:368-377(1989).
-1- FUNCTION: Seems necessary for viral DNA replication.
-1- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDINE=91021005; PubMed=2219713; Vasudevacharya J., Basak S., Srinivas R.V., Compans R.W.; Tasudevacharya J., Basak S., Srinivas R.V., Compans R.W.; Tasudevacharya J., Basak S., Srinivas R.V., Compans R.W.; M.; Tasudevacharya Sequence of an infectious clone of porcine Virology 178:611-616(1990).

-!- CATALYTIC ACTIVITY: Phosphate + oxaloacetate = H(2)O + phosphoenolpyruvate + CO(2).
-!- ENZYME REGULATION: By light-reversible phosphorylation.
-!- PATHWAY: Tricarboxylic acid cycle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE=92070471; PubMed=1720398;

Hermans J., Westhoff P.;
Hormologous genes for the C4 isoform of phosphoenolpyruvate
carboxylase in a C3 and a C4 Flaveria species.";
Mol. Gen. Genet. 234:275-284(1992).
-!-FUNCTION: Through the carboxylation of phosphoenolpyruvate (PEP)
it forms oxaloacetate, a four-carbon dicarboxylic acid source for
the tricarboxylic acid cycle.
-!- CATALXTIC ACTIVITY: Phosphate + oxaloacetate = H(2)O +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              --- ENZYME REGULATION: By light-reversible phosphorylation.
--- PATHMAY: Tricarboxylic acid cycle. This isozyme is involved in C4-photosynthesis.
---- SUBUNIT: Homotetramer.
---- SUBCELLIAR LOGATION: Cytoplasmic.
---- TISSUE SPECIFICITY: Mesophyll cells of leaves.
---- SIMILARITY: Belongs to the PEPCase family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 6583, Application US/09543681A

Patent No. 6605709

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: UNMER: US/09/543,681A
CURRENT APPLICATION NUMBER: US 60/128,706
PRIOR FILING DATE: 1999-04-09
NUMBER OF SEQ ID NOS: 8344
SEQ ID NO 6583
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

```
Uniquinous bounce taken in minute vitue of manages to in mouse 1 (variant A.9) cantains two groups that infect mammalian hoses: (i) defective (helper-dependent) adeno-associated viruses, and (ii) autonomous (helper-dependent) adeno-associated viruses, and (ii) autonomous (helper-dependent) parvoviruses. MWM is a member of the latter group. Both groups have been demonstrated to package both plus and minus strands (in separate particles) of the ss-DNA genome, though the minus strand is more typically packaged in the latter group.

The sequence below corresponds to the plus (+) strand, also referred to as the C-strand. The minus (-) strand is also referred to as the V-strand.

The 3' the remaini both exhibit the potential for forming stable 'fold-back' hairpins; these sequences appear to play a role in replication [1].

The left and right halves of the genome encode two distinct, but overlapping transcriptional units. The transcripts can be summarized [1] (1 map.unit (mu) = 51 bp):

R1 (48 kb): 4.5 mu - 10.7 mu; 38 mu - 46 mu; 46+ mu - 95 mu
R2 (3.3 kb): 4.5 mu - 10.7 mu; 38 mu - 46 mu; 46+ mu - 95 mu
R3 (3.0 kb): 40 mu - 46 mu; 46+ mu - 95 mu
R3 (3.0 kb): 40 mu - 46 mu; 46+ mu - 95 mu
R3 is the major transcript.

There are two major open reading frames, both on the plus (or C) strand. The left side ORF probably encodes a non-capsid protein of 85 kd; the right side ORF probably encodes the viral
                                                                                                                                                                                                                                                                                                                               1400
